

Getting Started with Finding Homes

What is Finding Homes?

Finding Homes is an Alexa skill that anyone can use to search for homes by voice. It can be accessed through the Amazon Alexa app or any Alexa device (such as an Echo Speaker, Echo Show, Firestick TV, or Alexa Auto).

How to I get started?

Option 1: Download the Amazon Alexa app on your phone.

Option 2: Scan the QR code below to launch the skill.

Option 3: If you have an Alexa device in your home, just say “Alexa, start Finding Homes”.

Anytime you want to start the skill, say, “Alexa, start Finding Homes.”

I have started the skill, now what?

As long as you know WHERE you want to search, Finding Homes does the rest. Tell it what you are interested in looking for. The skill will ask you clarifying questions, then give you search results that most closely match your criteria.

Frequently Asked Questions

for MLS members & subscribers

1. How can interested shoppers contact me through Finding Homes?

Shoppers can request your contact information directly from the listing page. When they ask to connect with the listing agent, Finding Homes provides them with your details so they can reach out to you directly.

2. How can users find my listings on Finding Homes?

Promote your listings by letting clients know they're accessible by voice!

- Include a [deep link to Finding Homes](#) in your email signature.
- Share a QR code (like the one below) on printed or digital materials.

Tip: Users can search by address or ZIP code. The more specific the query, the more targeted the results.

3. What can I do to improve the voice search experience for buyers?

Enhance your listings by filling in as many public-facing details as possible, especially: descriptive property information and image captions or descriptions.

Finding Homes uses this data to verbally describe listings. The more complete your listing, the richer and more informative the voice experience will be—avoiding phrases like “that information isn’t provided.”

4. Is Finding Homes available on all voice assistants?

Currently, Finding Homes is available exclusively on Amazon Alexa—including Echo devices and the Alexa mobile app. Alexa remains the most widely used voice assistant among U.S. consumers.
